## ARE MONTREAL ENGLISH SPEAKERS LIKELIER TO DISENGAGE FROM TREATMENT FOR PSYCHOSIS?

Anika Maraj1,2, Kathleen MacDonald ${ }^{1,2}$, Jai Shah ${ }^{1,2}$, Shruthi Venkataraman ${ }^{1}$, Srividya Iyer ${ }^{1,2}$

[^0]
## OBJECTIVES

- To provide a brief overview of historical and current perspectives on language in Montreal.
- To discuss early intervention approaches to treatment of psychosis.
- To investigate the impact of language status on service disengagement in EIP.

## DISCLOSURES

- Canadian Institutes of Health Research (CIHR)
- Fonds de recherche du Québec-Santé (FRQS)

## PSYCHOSIS

## EARLY INTERVENTION FOR PSYCHOSIS

- Intervening early to change the course of the illness
- Minimize relapse and maximize recovery potential in first 2-5 years (critical period)
- Rapid access \& phase-specific treatment
- Service engagement

## PEPP-MONTREAL

- Clinical, research and teaching program
- 2-year program
- Includes
- 14-35-year-olds
- Dx: affective or non-affective psychosis (not substance-induced psychosis)
- <1 month of anti-psychotic treatment
- IQ >70
- No organic brain damage
- No pervasive developmental disorder
- No epilepsy

## PEPP-MONTREAL

- Catchment area
- South West Montreal
- 400,000 people
- Incidence sample

## OUR OBJECTIVE

- To determine if official linguistic minority groups are likelier to disengage
- To compare rates and predictors of disengagement between English- and French-speakers

## METHODS

- All clients who consented and completed 2 years of treatment prior to November 2016
- N = 492 -> 460 with preferred language data
- Covariates included:
- age
- sex
- education level
- substance abuse
- immigrant status
- visible minority status
- family contact
- SDI, MDI
- medication non-adherence,

## ANALYSIS

- Group comparisons (Chi-squared, one-way ANOVAs)
- Kaplan-Meier time-to-event curves
- Cox Proportional Hazards Regression
- Univariate analysis
- Multivariate model

## SOCIODEMOGRAPHICS

|  | English ( $\mathrm{n}=201$ ) | French ( $\mathrm{n}=259$ ) | p |
| :---: | :---: | :---: | :---: |
| Age | 23.2 (4.5) | 23.8 (4.6) | 0.193 |
| Gender <br> Male <br> Female | $\begin{gathered} 142(70.6) \\ 59(29.4) \end{gathered}$ | $\begin{gathered} 185 \text { (71.4) } \\ 74 \text { (28.6) } \end{gathered}$ | 0.917 |
| Education Level Completed HS Did Not Complete HS | $\begin{gathered} 135 \text { (68.9) } \\ 61 \text { (31.1) } \end{gathered}$ | $\begin{gathered} 154 \text { (60.9) } \\ 99 \text { (39.1) } \end{gathered}$ | 0.091 |
| Substance Abuse No Yes | $\begin{aligned} & 82 \text { (42.3) } \\ & 112 \text { (57.7) } \end{aligned}$ | $\begin{aligned} & 108(43.5) \\ & 139(56.0) \end{aligned}$ | 0.645 |
| SDI | 71.9 (23.0) | 77.4 (17.6) | 0.006 |
| MDI | 55.5 (31.8) | 66.3 (28.1) | <0.001 |

## SOCIODEMOGRAPHICS

|  | English (n=201) | French ( $\mathrm{n}=259$ ) | P |
| :---: | :---: | :---: | :---: |
| Immigrant Status <br> $3^{\text {rd }}$ Generation <br> $1^{\text {st }}$ Generation <br> $2^{\text {nd }}$ Generation | $\begin{aligned} & 65(38.5) \\ & 48(28.4) \\ & 56(33.1) \end{aligned}$ | $\begin{gathered} 128 \text { (58.4) } \\ 58(26.5) \\ 33(15.1) \end{gathered}$ | <0.001 |
| Visible Minority White Black Asian Other | $\begin{aligned} & 117(59.7) \\ & 24(12.2) \\ & 28(14.3) \\ & 27(13.8) \end{aligned}$ | $\begin{gathered} 182(71.9) \\ 26(10.3) \\ 11(4.3) \\ 34(13.4) \end{gathered}$ | 0.001 |
| Family Contact Yes No | $\begin{gathered} 165 \text { (82.1) } \\ 36 \text { (17.9) } \end{gathered}$ | $\begin{gathered} 210 \text { (81.1) } \\ 49 \text { (18.9) } \end{gathered}$ | 0.810 |
| Med Non-Adherence <br> No <br> Yes | $\begin{gathered} 154 \text { (81.1) } \\ 36 \text { (18.9) } \end{gathered}$ | $\begin{gathered} 205(81.7) \\ 46 \text { (18.3) } \end{gathered}$ | 0.902 |

## GROUP DIFFERENCES

- Immigrant Status
- Lower proportion of $3^{\text {rd }}$ generation immigrants in English-speaking group (38.5\% vs. 58.4\%)
- Higher proportion of $2^{\text {nd }}$ generation immigrants in English-speaking group (33.1\% vs. 15.1\%)
- Visible Minority Status
- Higher proportion of Asians in English-speaking group (14.3\% vs. 4.3\%)
- SDI \& MDI
- English-speakers have higher socioeconomic standing

## SERVICE DISENGAGEMENT

|  | English <br> $(\mathrm{n}=201)$ | French <br> $(\mathrm{n}=259)$ | p |
| :--- | :---: | :---: | :---: |
| Disengagement <br> No <br> Yes | $141(70.1)$ <br> $60(29.9)$ | $204(78.8)$ <br> $55(21.2)$ | 0.031 |
| Time-to- <br> Disengagement | $11.0(5.8)$ | $11.4(6.5)$ | 0.725 |

Time-to-Disengagement Curves

## UNIVARIATE LOGISTIC REGRESSIONS

| Variable | N | HR | $95 \% \mathrm{Cl}$ | p |
| :--- | :---: | :---: | :---: | :---: |
| Preferred Language | 460 | 1.49 | $1.032-2.146$ | $\mathbf{0 . 0 3 3}$ |
| Immigration <br> $3^{\text {rd }}$ Gen <br> 1 st $^{\text {Gen }}$ <br> 2 $^{\text {nd }}$ Gen | 193 |  |  |  |
| Visible Minority | 106 | 1.06 | $0.635-1.765$ | 0.961 |
| White <br> Black <br> Asian <br> Other | 299 | 1.08 | $0.613-1.917$ | 0.826 |
| Family Contact | 50 |  |  | 0.782 |
| Med Non-Adherence | 441 | 0.96 | $0.551-1.676$ | 0.584 |

## UNIVARIATE LOGISTIC REGRESSIONS

| Variable | N | HR | $95 \% \mathrm{Cl}$ | p |
| :--- | :---: | :---: | :---: | :---: |
| Age | 460 | 1.01 | $0.969-1.049$ | 0.692 |
| Gender | 460 | 0.98 | $0.655-1.460$ | 0.914 |
| Education | 449 | 0.86 | $0.577-1.276$ | 0.451 |
| Substance Abuse | 442 | 0.98 | $0.891-1.081$ | 0.701 |
| SDI | 434 | 1.00 | $0.992-1.011$ | 0.803 |
| MDI | 434 | 1.00 | $0.996-1.009$ | 0.463 |

## MULTIVARIATE REGRESSION

| Variable | HR | $95 \% \mathrm{CI}$ | p |
| :--- | :---: | :---: | :---: |
| Preferred Language | 1.52 | $1.017-2.258$ | $\mathbf{0 . 0 4 1}$ |
| Family Contact | 1.08 | $0.665-1.757$ | 0.754 |
| Med Non-Adherence | 4.29 | $2.839-6.495$ | $<0.001$ |

## SUMMARY OF FINDINGS

- English-speakers are more likely to disengage from our EIP as compared to French-speakers
- Between English- and French-speakers there are group differences in regards to immigration status, visible minority status, SDI, MDI
- In the multivariate model, only preferred language and medication non-adherence are significant predictors of disengagement

## DISCUSSION

## PEPP-MONTREAL CLINICIANS

| Preferred <br> Language | Psychiatrists | Screening <br> Clinicians | Case <br> Managers | Other Services |
| :--- | :---: | :---: | :---: | :---: |
| English | 3 | 2 | 5 | 1 |
| French | 0 | 1 | 3 | 1 |
| Fluently <br> Bilingual | 5 | 2 | 6 | 2 |
| Total | 8 | 5 | 14 | 4 |

## BASELINE GROUP DIFFERENCES

- Immigrant Status
- More $2^{\text {nd }}$ generation immigrants and fewer $3^{\text {rd }}$ generation immigrants in English-speaking group
- But..immigrant status alone does not predict disengagement
- Visible Minority Status
- More Asians in English-speaking group
- But...visible minority status alone does not predict disengagement
- SDI \& MDI
- But English-speakers better off
- High-risk subgroup?
- Intersection between language/immigrant/visible minority status
- Role of medication non-adherence
- No difference in rates of medication non-adherence between groups

## BEYOND PEPP

- Montreal?
-Quebec?
- Canada?
- Policy level?

YOUR THOUGHTS?

## CONCLUSION

- Based on preliminary data, English-speakers are more likely to disengage from a Montreal-based EIP
- While there are baseline sociodemographic differences between groups, these do not sufficiently explain the main finding
- The reason for this finding remains unclear and warrants further exploration
